Things To Consider Before Buying a Trailer

Determine Your Hauling Needs
Consider the types of equipment to be hauled. Be sure to plan for growing needs, as well as, for any alternative or extra equipment to be carried.

Determine Your GVWR Needs
Once you determine the weight of the cargo you expect to haul, add the weight of the trailer to the expected payload capacity to determine the combined weight. Select a trailer with a Gross Vehicle Weight Rating (GVWR) higher than the combined weight of the trailer and its load. GVWR - Empty Weight = Maximum Payload Capacity

Evaluate the Tow Vehicle
Selection of an appropriate tow vehicle and the proper equipment to tow a trailer depends on the type of trailer including the size, weight, and the amount of weight being towed. The vehicle manufacturer may offer varying towing packages to meet the needs of various sizes and types of trailers.

Trailer Must Be Compatible With Tow Vehicle
You must determine your vehicle’s tow rating including maximum loaded weight and maximum tongue weight of a trailer. The vehicle owner’s manual contains this information. Most automotive manufacturers and dealerships have towing specification guides. Remember your vehicle and hitch system must be able to handle the same specifications.

Loading and Unloading Trailers
There are many options for loading and unloading. Some small trailers have tilt beds or ramp gates that can be lowered by hand. Other trailers may have side ramp gates or removable sides that act as ramps. Larger trailers may have split ramps for easier lifting. When loading the trailer remember to balance weight from side to side, distribute cargo weight evenly along the length of the trailer, secure and brace all items to prevent them from moving during travel, and don’t overload the weight capacity of the trailer.

The Importance of Correct Tire Size
Tires are significant in regards to weight, handling and the smoothness of the ride. All your trailer tires should be the same type, size and construction- do not mix bias ply and radial tires. In selecting tires for your trailer, buy the size, type and load range found on the trailer’s certification label or in the owner’s manual. Each trailer tire handles a specific weight limit. Be sure to check that the tires on the trailer are adequate for the load and are properly inflated. Regularly check all tires for proper wear and correct air pressure.

Key Differences Between Open and Enclosed Trailers
Open Trailers are great for a variety of uses. Size availability includes trailers ranging from about 4 x 6 feet to 8.5 x 30 feet and even longer. Some trailers feature deckovers, mesh sides or tall steel sides that surround the edge. These types of rails are important for keeping the equipment contained while in transit.

Enclosed Trailers have several advantages, including the ability to lock up your equipment. This feature is particularly important if a storage place is not available. Enclosed trailers may be used as an extra storage facility during off-season as well. Although it is still important to properly secure the load, the enclosed trailer has the advantage of containing your equipment if the load should shift. This benefit can help you prepare for a safer towing experience. Enclosed trailer sizes vary similarly to open-style trailers. Smaller enclosed trailers can come in 4 x 6 foot with a single axle, and trailers increase in size up to 8.5 x 30 feet with up to 3 axles. Standard features could include rock guards, roof vents, interior lighting and tie-downs.

* Helpful Tips for Purchasing the Right Trailer:

Check for Proper Licensing and Registration
It is the customer’s responsibility to make sure the trailer complies with federal, state and local regulations, as well as, to properly license the trailer after purchasing it. When a trailer is sold, the purchaser will receive a Manufacturer Certificate of Origin (MCO) which is to be taken to the local license bureau with the Bill of Sale, and in most states, a title will be issued.

5-Steps To Guide You In The Ordering Process.
1. Determine the size and weight of the cargo that is to be hauled.
2. Decide if you need an enclosed trailer or an open trailer.
3. Determine the maximum weight of the tow vehicle and how much weight can be towed.
4. Determine the size of the trailer coupler. The trailer ball on the tow vehicle must be the exact size.

Contact Carry-On Customer Service At 1-800-240-3121 To Discuss Options On Various Models That You Are Interested In.
All trailers meet or exceed all government regulations and industry standards.
